

Project Status Report – Phishing Detection Chrome Extension

Current Progress

- Core extension structure completed
 - Popup UI implemented
 - Background script successfully tracking tab updates
 - Content script extracting page data
 - Basic phishing detection rules implemented
-

Completed Features

- URL monitoring
 - Suspicious URL detection
 - Communication between scripts
 - User warning system in popup
-

Challenges Encountered

- Debugging message passing between scripts
 - Handling asynchronous Chrome API behavior
 - Ensuring content script runs on all relevant pages
-

Remaining Work

- Improve detection accuracy
 - Add more phishing heuristics
 - Enhance UI design
 - Perform testing on real phishing examples
-

Next Steps

- Implement additional detection rules
- Optimize performance
- Conduct user testing
- Finalize documentation

Overall Status

Project is **functional but still in development**, with core features implemented and improvements in progress.
